Professional Summary

Proactive **Full Stack Software Engineer** with hands-on experience in building and deploying scalable web applications using modern **JavaScript frameworks** and **cloud technologies**. Proven track record of solving complex technical problems, **optimizing system performance**, and **collaborating** across teams to deliver production-ready solutions

Experience

SoftwareEngineer Intern | Dev-Evelopers Software & Solutions

June 2025 - Present

- Engineered scalable full-stack web modules using **TypeScript**, **React.js**, **Node.js**, and **MongoDB**, improving application performance and maintainability.
 - Optimized critical API endpoints and restructured database indexing strategies, achieving 40% decrease in query execution time and improved system reliability to 99.2% uptime
 - Designed 12+ responsive UI components using React and Tailwind CSS with modular architecture patterns, ensuring consistent design language and reducing development time by 30% for future iterations
-

Projects

Dev-Circle

- Designed and developed full-stack MERN stack application with core features including event creation, participant registration, submission tracking, and integrated chatbot assistance for **real-time user support**.
- Implemented **JWT-based authentication** with role-based access control (RBAC) architecture supporting three distinct user workflows: organizers, judges, and participants, enabling proper permission management across the platform.
- Built real-time update system using WebSockets and deployed on AWS for testing phase, with containerized architecture using Docker to ensure consistency across development and testing environments

Smart-Eat

- Developed full-stack **QR code-based** ordering platform with distinct interfaces for customers, kitchen staff, and administrators to manage the complete ordering workflow.
 - Implemented real-time order status tracking system using Node.js event emitters and **WebSockets** to push live notifications to users, enabling transparent communication during order preparation.
 - Created **inventory management** module with low-stock alerts and automated menu availability updates.
-

Technical Skills

Programming Languages: C++, JavaScript (ES6+), Python, C#, PHP, TypeScript.

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Modular CSS.

Backend & APIs: Node.js, Express.js, RESTful API development , ASP.NET.

Databases: MongoDB, MySQL, PostgreSQL.

Cloud & DevOps: AWS(EC2, S3) , Git(CI/CD) , Docker .

Core CS Concept : Computer Networks (TCP/IP) , Operating System , Database Management System(SQL) , Object Oriented Programming , Data Structure and Algorithm , System Design(LLD).

Education

Bachelor of Technology in Computer Science and Engineering

Birla Institute of Applied Sciences | July 2022 - June 2026

Current GPA: 8.0/10

Achievements

- Led sustainability initiatives as Secretary of SDG Club, organizing campus awareness programs and driving student engagement in United Nations Sustainable Development Goals aligned activities
- Secured placement in **Smart India Hackathon (SIH)** through internal selection competing against 55+ university teams, demonstrating **technical proficiency** and innovative **problem-solving** approach [JeevanID](#).
- Solved over 450 problems across [GeeksforGeeks](#) and [LeetCode](#), strengthening Data Structures and Algorithms (DSA) concepts and enhancing problem-solving efficiency. Actively participate in competitive programming on [Codeforces](#), with my university ranked among the top 20 on GeeksforGeeks.
